

React JS Contents

Introduction to reactjs

Introduction to reactjs

Virtual DOM

Environmental setup

Installation of 'yarn' tool

Installation of 'create-react-app' tool

First React application

Creation of react application

Executing react application

Project structure of react application

Components in ReactJS

Components

Functional components

Class components

Multiple components in a component

Registering components

state

State

Storing component data

State

Displaying dynamic data

Setting state

Changing State

props

Communication Between components

Props

Inputs

Handling inputs in reactjs

Handling input events

Handling form inputs

Lifecycle Methods

Lifecycle methods

Mandatory methods

Optional methods

Asynchronous Network calls

Asynchronous Network calls

Asynchronous calls with axios

GET request using axios

POST request using axios

Handling Positive results

Handling Negative results

Handling Error Results

Imports and Exports

Imports and Exports in reactjs

Exporting variables, functions, objects classes

Default export

Single Page Application (SPA)

Single Page Application

Routing in reactjs

Single Routing

Nested Routing

Introduction to react with typescript environment

JSON Server

JSON Server

Installation

Changing port number

GET, POST, PUT, DELETE requests

Higher order components

Higher order components

Passing component as argument

Pure components

Unit testing

Introduction to testing

Unit testing

Jest framework for unit testing

Test suites

Redux

Introduction to redux

Redux architecture

Redux store

Redux reducer

Request to redux dispatch with actions

Response from redux subscribe with state

Redux as service

React with redux

Multiple reducers

NodeJS interaction

Nodejs interaction with MySql

Nodejs interaction with Mongodb

Thunk

Introduction to thunk

Reactjs nodejs Mysql CRUD operations

Reactjs nodejs MongoDB CRUD operations

Integration of Reactjs with hosted servers
